

## INSTALLATION GUIDE

Remiq AD Sampler (Pro/Lite versions) is distributed as VST3, AU and Standalone.

### macOS

Before you start, close all DAWs before installing Remiq AD Sampler or replacing an older version.

1. Download the DMG file from the official download link.
2. Open your Downloads folder.
3. Double-click the downloaded `.dmg` file to mount it.
4. In the disk image window, double-click `Remiq AD Sampler Installer.pkg`.

**The current beta package is not notarized yet. We are already preparing the proper Apple-notarized installer.**

**Because of this, macOS Gatekeeper may show a standard security warning saying that Apple could not verify the installer. This is expected for the current beta build and does not indicate a specific problem with the plugin.**

If macOS blocks the package:

1. Click Done in the macOS warning dialog.
2. Open the Apple menu in the top-left corner of the screen.
3. Choose System Settings.
4. Go to Privacy & Security.
5. Scroll down to the Security section.
6. Find the message saying that `Remiq AD Sampler Installer.pkg` was blocked to protect your Mac.
7. Click Open Anyway.

8. Confirm by clicking Open Anyway again if macOS asks for final confirmation.
9. Continue through the standard macOS Installer.

## **Installed locations**

The package installs plug-in formats into standard macOS system folders used by DAWs:

```
/Library/Audio/Plug-Ins/VST3/Remiq AD Sampler Pro.vst3  
/Library/Audio/Plug-Ins/Components/Remiq AD Sampler Pro.component  
/Applications/Remiq AD Sampler Pro.app
```

```
/Library/Audio/Plug-Ins/VST3/Remiq AD Sampler Lite.vst3  
/Library/Audio/Plug-Ins/Components/Remiq AD Sampler Lite.component  
/Applications/Remiq AD Sampler Lite.app
```

## **After installation**

Restart your DAW. If your DAW has a plug-in manager or scanner, rescan plug-ins. Remiq AD Sampler should appear as both VST3 and Audio Unit.

This temporary security flow does not reduce the quality or functionality of Remiq AD Sampler. It is only part of the beta installation process while notarization is being completed.

If your DAW still shows a warning:

1. Close the DAW.
2. Open System Settings > Privacy & Security.
3. Allow Remiq AD Sampler if macOS shows a blocked plug-in message.
4. Open the DAW again.
5. Rescan plug-ins.
