

INSTALLATION GUIDE

Retrig MP Trigger is distributed as VST3 and AU.

macOS

Before you start, close all DAWs before installing Retrig MP Trigger or replacing an older version.

1. Download the DMG file from the official download link.
2. Open your Downloads folder.
3. Double-click the downloaded `.dmg` file to mount it.
4. In the disk image window, double-click `Retrig MP Trigger Installer.pkg`.

The current beta package is not notarized yet. We are already preparing the proper Apple-notarized installer.

Because of this, macOS Gatekeeper may show a standard security warning saying that Apple could not verify the installer. This is expected for the current beta build and does not indicate a specific problem with the plugin.

If macOS blocks the package:

1. Click Done in the macOS warning dialog.
2. Open the Apple menu in the top-left corner of the screen.
3. Choose System Settings.
4. Go to Privacy & Security.
5. Scroll down to the Security section.
6. Find the message saying that `Retrig MP Trigger Installer.pkg` was blocked to protect your Mac.
7. Click Open Anyway.
8. Confirm by clicking Open Anyway again if macOS asks for final confirmation.

9. Continue through the standard macOS Installer.

Installed locations

The package installs both plug-in formats into standard macOS system folders used by DAWs:

```
/Library/Audio/Plug-Ins/VST3/Retrig MP Trigger.vst3
```

```
/Library/Audio/Plug-Ins/Components/Retrig MP Trigger.component
```

After installation

Restart your DAW. If your DAW has a plug-in manager or scanner, rescan plug-ins. Retrig MP Trigger should appear as both VST3 and Audio Unit.

This temporary security flow does not reduce the quality or functionality of Retrig MP Trigger. It is only part of the beta installation process while notarization is being completed.

If your DAW still shows a warning:

1. Close the DAW.
2. Open System Settings > Privacy & Security.
3. Allow Retrig MP Trigger if macOS shows a blocked plug-in message.
4. Open the DAW again.
5. Rescan plug-ins.
